9. Troubleshooting & FAQ

1. Introduction

The HR Leave Request module gives every employee a simple way to request time off and gives managers a clear approval workflow. Each request captures the leave type, the dates, and a reason, then moves through a defined approval cycle.

Beyond simple approvals, the module understands your organisation's paid leave policy. It tracks how many paid leave days an employee has used in the year and in the month, automatically splits a request into paid and unpaid days when the quota is exceeded, and calculates a salary deduction for the unpaid portion. A REST API is also included so the same workflow can be driven from a mobile app.

1.1 Who Should Read This Manual

- **Employees** – raise leave requests, track their status and understand paid versus unpaid days.
- **Managers / Leave Managers** – review, approve or reject requests and view the leave history of their team.
- **HR Administrators** – configure the company leave policy and the paid leave quotas.

1.2 Key Capabilities

- Leave requests with from date, optional to date, half-day option and a reason.
- Six leave types: Sick, Casual, Annual, Personal, Emergency and Other.
- A clear state machine: Draft, Pending Approval, Approved, Rejected and Cancelled.
- Configurable paid leave quota per year and per month.
- Automatic split into paid and unpaid days when the quota is exceeded.
- Automatic salary deduction calculation for unpaid days.
- Per-employee leave balance tracking.
- Optional carry-forward of unused paid leave.
- Overlap protection so two requests cannot cover the same dates.
- REST API endpoints for mobile app integration.

Before you begin

This module depends on the standard Employees (hr) and Attendances (hr_attendance) apps. The salary-based deduction for unpaid leave uses the employee's monthly wage, so make sure wages are maintained on employee records if you intend to use unpaid deductions.

2. Core Concepts

2.1 Leave Types

Every request is classified with one of six leave types. The type is descriptive — the paid quota applies across all types together, not per type.

Leave Type	Typical Use
Sick Leave	Illness or medical reasons.
Casual Leave	Short, planned personal time off. This is the default type.
Annual Leave	Planned vacation.
Personal Leave	Personal matters that do not fit the other categories.
Emergency Leave	Unforeseen urgent situations.
Other	Anything not covered above.

2.2 Number of Days

The number of days on a request is calculated automatically:

- **Half day** – if the Half Day option is ticked, the request counts as 0.5 days.
- **Date range** – if a To Date is set, the request counts the inclusive number of calendar days from the From Date to the To Date.
- **Single day** – if no To Date is set and it is not a half day, the request counts as 1 day.

2.3 Paid, Unpaid and Partial

When the company leave policy has paid leave enabled, every request is measured against the remaining paid quota. The module checks both the yearly quota and the monthly quota and uses whichever leaves less room.

Outcome	Meaning
Fully Paid	The whole request fits within the remaining paid quota. No deduction.
Partial	Part of the request fits within the quota and part does not. The paid portion is free; the unpaid portion may carry a deduction.
Unpaid	None of the request fits within the remaining quota. The whole request may carry a deduction.

How the unpaid deduction is calculated

When unpaid leave deduction is enabled, the deduction for the unpaid portion is:

deduction = monthly wage ÷ calendar days in the month × unpaid days

A half day of unpaid leave is therefore half of that daily rate.

2.4 The Request Lifecycle

Every request follows this state machine:

State	Meaning	Who Acts
Draft	Being prepared. All fields are editable.	Employee
Pending Approval	Submitted and awaiting a decision.	Manager
Approved	Approved by a manager. Counts towards the leave balance.	—
Rejected	Declined by a manager. Can be reset to draft.	Employee
Cancelled	Withdrawn from draft, pending or approved. Can be reset to draft.	Employee

3. Navigating the Module

All features live under the Attendances app, in the Leave Requests menu group.

Menu	Purpose	Typical User
All Leave Requests	Every request across the organisation. Opens filtered to pending requests.	Leave Manager
My Leave Requests	Your own requests only. Use this to raise and track leave.	All employees
Approved Leaves Report	All approved leaves, grouped by employee, for reporting.	Manager / HR
Configuration > Leave Policy	Define the company paid leave quota and deduction settings.	Leave Manager

Visibility note

All Leave Requests and the Leave Policy configuration are restricted to Leave Managers and system administrators. Regular employees see only My Leave Requests and the Approved Leaves Report. A security rule ensures employees can see and edit only their own requests.

4. Configuration: Leave Policy

The leave policy is configured once per company. Open Attendances > Leave Requests > Configuration > Leave Policy and create or edit the record for your company.

4.1 Paid Leave Settings

Field	Description	Default
Enable Paid Leave	When on, employees receive a fixed paid leave quota. When off, no request is treated as paid.	On
Paid Leave Days Per Year	Total paid leave days allowed per employee per year.	12
Paid Leave Days Per Month	Paid leave days allowed per employee per month.	1.0

Yearly and monthly limits work together

A request is treated as paid only if it fits within both the remaining yearly quota and the remaining monthly quota. The module uses whichever limit leaves less room. This prevents an employee from using a whole year's quota in a single month.

4.2 Unpaid Leave / Deduction Settings

Field	Description	Default
Enable Unpaid Leave Deduction	When on, unpaid leave days generate a salary deduction calculated from the employee's monthly wage. When off, unpaid days are recorded but no deduction is calculated.	On

4.3 Carry Forward

Field	Description	Default
Allow Carry Forward	When on, unused paid leave can be carried forward to the next year.	Off
Max Carry Forward Days	The maximum number of days that can be carried forward. Shown only when carry forward is enabled.	5

Policy changes are not retroactive in spirit

Paid and unpaid status is recalculated whenever a request changes. If you change the quota mid-year, future requests will be measured against the new quota. Review existing

pending requests after any policy change.

5. Raising a Leave Request

This section is for employees. Open Attendances > Leave Requests > My Leave Requests.

5.1 Step by Step

1. Click New.
2. Confirm your name in the Employee field.
3. **Choose the Leave Type.** Casual Leave is selected by default.
4. **Set the From Date.** This is required.
5. **Set the To Date if the leave spans more than one day.** Leave it empty for a single-day request.
6. **Tick Half Day** if you need only half a day off. When ticked, the To Date is hidden and the request counts as 0.5 days.
7. **Enter the Reason.** This is required and explains why you need the leave.
8. Review the calculated Number of Days, Paid Days, Unpaid Days and Deduction Amount.
9. Click Submit for Approval. The request moves to Pending Approval and your manager is notified.

Reading the paid and unpaid fields

Before you submit, the form already shows how the request will be treated. If Unpaid Days is greater than zero, part or all of your leave falls outside the paid quota and a deduction may apply. If you see this and did not expect it, check your remaining balance or speak to HR before submitting.

5.2 Editing, Cancelling and Resubmitting

- **While in Draft** – every field is editable. You can also edit the reason while the request is Pending Approval.
- **Cancel** – a request in Draft, Pending Approval or Approved state can be cancelled. A confirmation is shown first.
- **Reset to Draft** – a Rejected or Cancelled request can be reset to draft, edited and submitted again.

Overlap protection

You cannot have two active requests covering the same dates. If you try to submit a request that overlaps an existing one that is not rejected or cancelled, the module blocks it and names the conflicting request.

6. Approving Leave Requests

This section is for managers. Open Attendances > Leave Requests > All Leave Requests. The view opens filtered to pending requests.

6.1 Reviewing a Request

10. Open a request in the Pending Approval state.
11. Review the employee, leave type, dates and the number of days.
12. **Check the Paid Days, Unpaid Days and Deduction Amount.** These tell you the financial impact of approving the request.
13. Read the employee's stated reason.

6.2 Approving or Rejecting

- **Approve** – click Approve. The request moves to Approved, and the approver and date are recorded. Approved leave counts towards the employee's yearly balance.
- **Reject** – click Reject. The request moves to Rejected. You can add a rejection reason. The employee can reset it to draft and resubmit.

Only pending requests can be decided

Approve and Reject act only on requests in the Pending Approval state. A request that is still in draft has not been submitted and cannot be approved.

6.3 The List View at a Glance

The leave request list uses colour to make the status obvious at a glance:

Colour	Status
Green	Approved
Amber	Pending Approval
Red	Rejected
Grey	Cancelled

7. Leave Balance and Reporting

7.1 Employee Leave Balance

The module tracks each employee's paid leave balance for the year. The balance is the yearly paid quota minus the total days on approved requests for that year. This balance figure is what the mobile app and other modules read when they need to show how much paid leave remains.

7.2 Approved Leaves Report

Open Attendances › Leave Requests › Approved Leaves Report for a view of all approved leave across the organisation, grouped by employee. Use the search filters to narrow by leave type, month or date range.

7.3 Search and Group Options

- **Filters** – Pending, Approved, Rejected, My Requests, and a date filter on the From Date.
- **Group By** – Employee, Leave Type, Status or Month.

8. Mobile App Integration (REST API)

The module exposes a set of authenticated JSON endpoints so the same leave workflow can be driven from a mobile app. All endpoints require an authenticated user session. This section is a reference for app developers and IT administrators; day-to-day users do not need it.

Endpoint	Purpose
/leave/request/create	Create a new leave request and submit it for approval in one call.
/leave/request/my_requests	Return the current user's leave requests, optionally filtered by state.
/leave/request/pending	Return all pending requests for a manager to review.
/leave/request/approve	Approve a leave request by its ID.
/leave/request/reject	Reject a leave request by its ID, with an optional rejection reason.
/leave/request/cancel	Cancel a leave request by its ID.
/leave/request/report	Return leave report data with optional employee, department, date and state filters.

For administrators

Each endpoint returns a JSON object with a status flag and either a data payload or a message. Because these endpoints act on behalf of the authenticated user, the same security rules that apply in the web interface also apply through the API.

9. Troubleshooting & FAQ

9.1 Common Questions

Question	Answer
My request shows unpaid days I did not expect.	Your remaining paid quota for the year or the month is smaller than the request. The module uses whichever limit leaves less room. Check your leave balance and recent approved requests.
The deduction amount is zero even though there are unpaid days.	Either unpaid leave deduction is disabled in the company policy, or the employee has no monthly wage on record. The deduction needs a wage to calculate from.
I cannot submit my request — it says dates overlap.	You already have another active request covering one or more of the same dates. Cancel or adjust the conflicting request first. Rejected and cancelled requests do not count as conflicts.
I cannot approve a request.	Approve works only on requests in the Pending Approval state. Confirm the employee has actually submitted the request, and that you are a member of the Leave Manager group.
An employee says they cannot see other people's requests.	This is intended. A security rule limits employees to their own requests. Only Leave Managers and administrators see all requests.
A rejected request needs to be tried again.	The employee can open the rejected request, click Reset to Draft, adjust it and submit again.

9.2 Good Practice Checklist

- Configure the company Leave Policy before employees start raising requests.
- Decide whether unpaid leave deductions should be enabled, and maintain employee wages if so.
- Encourage employees to review the paid and unpaid fields before submitting.
- Managers should review the deduction amount as part of the approval decision.
- Use the Approved Leaves Report grouped by employee for periodic reviews.
